

Flexo Fan-Out

The Flexo Fan-Out is a reliable method for directly terminating outdoor or universal multi-fibre cables. This robust, factory-made breakout point with aluminum body can accommodate between 6 and 144 fibres.

The tensile force from the input cable is distributed through the aramid yarns through an inner epoxy filling to the top ring, which holds output tubing that can handle over 1,000 N of force.

Characteristics:

- Compatible with outdoor cables with outside diameters between 7 and 16mm.
- Supports from 6 up to 144 fibres, all with standard output tubing.
- Epoxy-filled aluminium body.
- Modular design where one body can handle different types of rings, enabling the use of various numbers of tubes to cover a wide range of applications.
- The construction of the FLEEXO breakout ensures minimal disruption on IL.
- Suggested additional equipment may include: Bend limiter for main cable, bracket for fixation to patch panels, d-holder, or pulling and protection hose for connectors.
